

Damascus Slide Etching Directions

Caspian Arms Ltd.
75 Cal Foster Dr.
Wolcott, VT 05680-0173

Congratulations on your new Damascus Slide! We hope you will enjoy your precious slide for many years to come. Caspian Arms is proud to bring you the joy of this miraculous artistic version of our exquisite quality slides. Your slide has been carefully etched so you can see its beauty the moment you open the package.

If for any reason you need to etch again, here's how.

1. Wearing rubber gloves to prevent fingerprints, degrease the slide and then Glass blast it.
2. Submerge the slide in Hardware Store Variety Muriatic Acid, or equivalent, for 5 minutes.
3. Being careful not to 'smudge' the pattern, transfer the slide into a bath of hot soapy water, for about 2 minutes.
4. Rinse the slide under hot running water.
5. Using an air hose blow the slide dry and spray with oil, or coat with a clear bake on finish. **DO NOT AIR DRY!**

Note: Unhealthy gases are formed during the etching process. Always insure adequate ventilation, and avoid breathing in fumes or getting acid on skin or clothing. Wear Latex gloves and protective eyewear for additional protection. The acids must be handled with care.

Enjoy!!
